SUMMARY

Full Stack Engineer with 3.5+ years building real-time, scalable web and mobile applications across healthtech and agritech domains. Proven track record of cutting inter-service latency by 90% via async queue migration and reducing file transfer time by 40% through compression optimization. Experienced in end-to-end ownership — from microservices architecture and AI integrations to cross-platform mobile delivery using MERN, Next.js, NestJS, and React Native.

SKILLS

- **Frontend** : React.js, Next.js, ReactNative, ExpoGo, Redux, RTKQuery, JavaScript, TypeScript, HTML, CSS, Tailwind, Bootstrap, Material UI
- **Backend** : Node.js , Express.js, Nest.js, Strapi, MongoDB, Postgres, MySql , Mariadb
- **Miscellaneous** : RabbitMq, BullMq, S3, Docker, Micro-services, Lua-script, AWS, Cid Pipeline, Jira, PostMan, Performance Optimization, REST APIs, Git, unit testing, agile/scrum
- **Soft Skills** : Project Management, Leadership , Effective Communication, Problem Solving, Teamwork, Adaptability

WORK EXPERIENCE

Tene Agricultural Solutions Pvt Ltd

Bengaluru

Software Developer

Nov 2024 - Present

- Engineered a real-time cross-platform chat solution (Android & Web) using microservices architecture, improving system scalability, modularity, and performance.
- Architected and implemented multi-language support (i18n) in Android applications, enhancing accessibility across diverse user bases.
- Solely owned end-to-end multiple mobile app development and backend integration, ensuring seamless user experience and robust system architecture.
- Engineered a scalable admin panel using Next.js and Nest.js, enabling efficient management of users, content, and analytics.
- Designed and implemented seamless data flow between admin panel and Android applications, enabling real-time synchronization and efficient content management.
- Built reusable UI components using React Native and Tailwind CSS, reducing development time by 30%.

Neos HealthTech Pvt Ltd

Chennai

Software Developer Engineer

Aug 2022 - Nov 2024

- Reduced file size by 35%, leading to a 40% reduction in file transfer time, lower cloud storage costs, and enhanced file loading speed.
- Achieved 90% efficiency gain in inter-service communication by migrating from REST to async queues (RabbitMQ), enhancing user experience.
- Crafting application architecture and APIs with meticulous adherence to SOLID principles, incorporating both high-level and low-level designs.
- Integrated AI solutions from third-party companies to enhance application functionality and user experience, streamlining workflows and improving user engagement.
- Optimized micro-frontends with Turborepo + pnpm, accelerating development.

EDUCATION

Bachelor of Computer Applications

The Study Hall College

Specialization in Computer Application and Software Development.

May 2018 - May 2021

Lucknow

78%

PROJECT

Medical Scan Finding([github](#))

Developed an application integrating multiple AI models to assist in diagnosing critical findings from medical scans.

- Designed and developed the entire backend using NestJS, implementing a modular architecture for each AI model to ensure scalability.
 - Integrated multiple AI models via REST APIs and DICOM protocols to detect and analyze critical findings in medical scans.
 - Implemented a credit-based usage tracking system to monitor and manage user consumption across multiple AI models/modules.
-

CERTIFICATION

Full Stack Web Development

Masai School

Oct 2021 - Jul 2022

Bengaluru
